DETAILED ACTION

Specification

1. Claims 12-57 are presented in this application for examination.

Information Disclosure Statement

2. The Information Disclosure Statement submitted by applicant on 10/21/2003 has been considered. Please see attached PTO-1449.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly

owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 12-57 are rejected under the judicially created doctrine of double patenting over claims 1-11 of U. S. Patent No. 6,684,292 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: The patent 6,684,292 claims "a method of hot-plugging a memory into a system by initiating a first refresh request and waiting a number of clock cycles and then initiating a second refresh requests to each of the plurality of memory segments and replacement segment and transitioning the computer from a non-redundant mode to a redundant mode" and the instant application is claiming a system and its method of resynchronizing a memory system by initiating a first refresh request and waiting a number of clock cycles and then initiating a second refresh requests to each of the plurality of memory segments and replacement segment and transitioning the computer from a non-redundant mode to a redundant mode

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.
